BizCover   September 15, 2025
Level 2, 338 Pitt St, Sydney, NSW 2000 Australia

Dear Hiring Manager,

I am writing to apply for the Junior / Mid-level role of **Software Development Engineer** at **BizCover**. Your listing makes working at Bizcover seem hugely exciting, whilst the reviews from former companies make it seem challenging.

I have recently graduated with a Computer Science degree from UNSW and am seeking an entry-level position into the industry. I have been shipping correct, complex and reliable software across the stack, both for university projects and my own digital needs. I think working at Bizcover will help me develop my Javascript / Typescript stack, and I would be keen on receiving any degree of mentorship.

I like that you folks value character and uniqueness – a quality that sometimes gets me in trouble. The 1 minute careers video was motivating and this coupled with the flexibility of a hybrid position is appealing to me.

Working with and around insurance calms my probalistic mind, and the advertised career development is something that I would wish to make the most of.

I am somewhat acclimated to managing stake-holder requirements, having taken a full-course (comp3900) on delivering a Full-Stack Medical Practice Web App to a real-world stake-holder.

I have experience with Node.js and Vue.js, though I can't remember when and why I used these frameworks. Javascript is ubiquitous on my website `https://abaj.ai` and I am refactoring `https://bots.abaj.ai` in Typescript to sharpen my coding skills for this current job hunt.

Overall, I have a strong foundation in CS fundamentals and Software Engineering principles, and believe that my work-ethic coupled with a supportive environment can really help achieve the company goal of "tak[ing] the hassle out of business Insurance"

In team contexts, I bias toward readable code, tests, and small iterations. I believe in communication as the lubrication of a team (I play Ultimate Frisbee–a team sport–competively). I am also comfortable with Git, issue tracking, and code reviews. A maxim of mine is "always version control your code".

I have full work rights in Australia and can start immediately.

Kind regards,

Aayush Bajaj
