## Why I Wish to Work at Google

Aayush Bajaj

March 9, 2025

.....

I own stock. That is obviously **not** the *only* reason I wish to work at Google, but rather it is a signal of how much conviction I have in the company;

“put your money where your mouth is”.

Anyways, **Pytorch**, **Go**: the language and its **Deepmind** implementation; the **PageRank** and **Attention** algorithms and Google Maps. Many of the technologies that I enjoy using and have beautiful internals turn out to have been made by Google!

I have been tinkering with computers for 15 years, and seriously programming them for 7. In that time Google has evolved from being “just a mystical search engine”<sup>1</sup>, to becoming the likely pioneer of quantum computing. Within this revelation is a genuine excitement and interest about the technology and subject stacks that are used, and the principles and designs that Google implements to guarantee such perfect products.

In conclusion, I also have a definite desire to craft technologies which leverage Mathematics to the power of Programming. Hire me so that I may work with/for Google and practise making the world a better place.

“When you’re a carpenter making a beautiful chest of drawers, you’re not going to use a piece of plywood on the back, even though it faces the wall and nobody will ever see it. You’ll know it’s there, so you’re going to use a beautiful piece of wood on the back. For you to sleep well at night, the aesthetic, the quality, has to be carried all the way through.”

— Steve Jobs
