**Winning Group**  
Level 2, 20A Danks Street, Waterloo NSW 2017

September 15, 2025

Dear Hiring Manager,

I am writing to apply for the Junior role of **Full Stack Developer** at **Winning Group**. Your listing makes working at Winning Group seem as if I would be welcomed into a big family.

I have recently graduated with a Computer Science degree from UNSW and am seeking an entry-level position into the industry. I have been shipping correct, complex and reliable software across the stack, both for university projects and my own digital needs. I think working at the Winning Group will help me upskill across the whole stack, and I would be keen on receiving any degree of mentorship.

I like that you folks value character and uniqueness – a quality that sometimes gets me in trouble. The careers video was motivating and has me thinking that there will be room in the job for *algorithmic ingenuity*.

I am somewhat acclimated to managing stake-holder requirements, having taken a full-course (comp3900) on delivering a Full-Stack Medical Practice Web App to a real-world stake-holder. The tech-stack for this project included React on the front-end and Python in the backend.

I have experience with Node.js and Vue.js, but not Angular. Javascript is ubiquitous on my website <https://abaj.ai> and I am currently refactoring <https://bots.abaj.ai> (which was previously vibe-coded with React and Node) into Angular. The 3-layered stack is a culmination of many of my employable skills; Postgres, Auth, API integration, etc.

Overall, I have a strong foundation in CS fundamentals and Software Engineering principles, and believe that my work-ethic coupled with a supportive environment can really help achieve the company goal of “creat[ing] the best experiences in the world, for the world”.

In team contexts, I bias toward readable code, tests, and small iterations. I believe in communication as the lubrication of a team (I play Ultimate Frisbee—a team sport—competitively). I am also comfortable with Git, issue tracking, and code reviews. A maxim of mine is “always version control your code”.

I have full work rights in Australia and can start immediately.

Kind regards,

**Aayush Bajaj**
